

Døgnforekomst for Hits

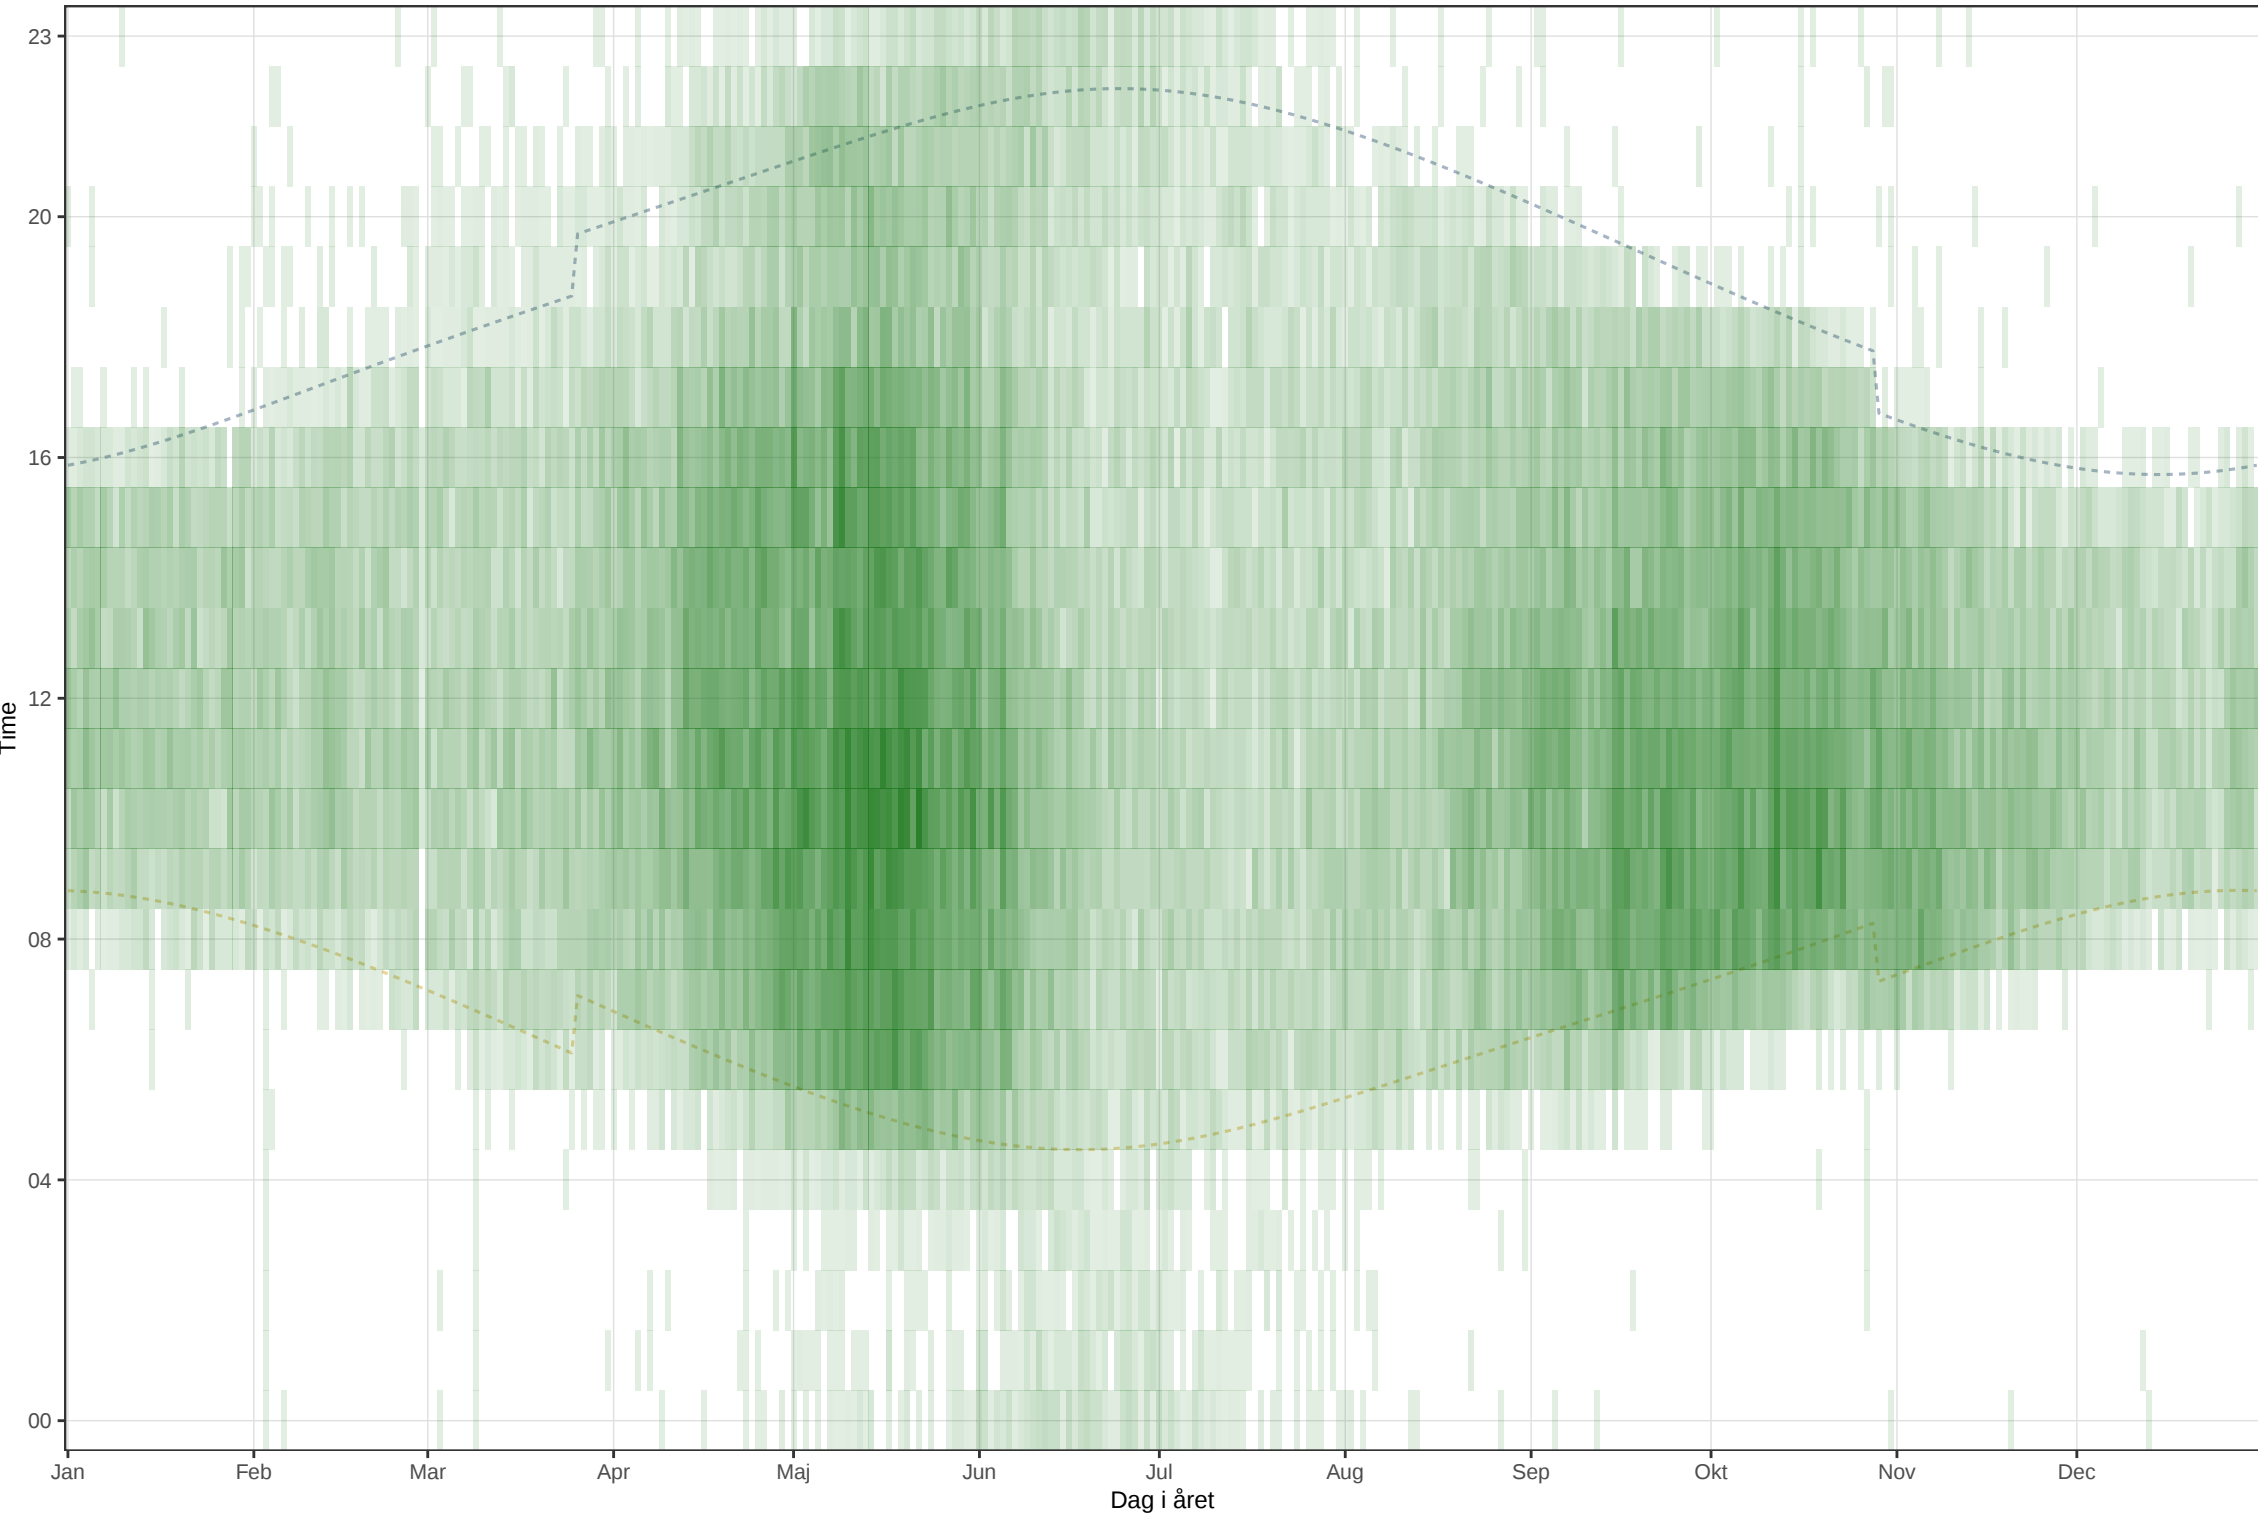

Dag i året x time på døgnet

Sådan beregnes figurerne: Kun observationer med observationstid indgår, og der bruges kun observationens egne tider, ikke turens tider. Start- og sluttider sat til 00:00 behandles som manglende, da de ofte ligner pladsholder-værdier. Hvis kun den ene tid derefter findes, bruges den som observationens time i stedet. Hvis kun en start- eller sluttid findes, farves den pågældende hele time. Hvis både start- og sluttid findes, farves alle hele timer mellem dem inklusive start- og sluttimen. Alle datoer standardiseres til år 2000, så x-aksen viser dagnummeret i året fra 1. januar til 31. december. For at undgå at mange parallelle registreringer på samme lokalitet samme dag fylder for meget, tælles hver art kun én gang pr. dato, lokalitet, time og artsnavn efter time-udvidelsen. Farven viser sjældenhedskategori: grøn for Subhits og rød for SU-hits. Mørkere felter viser datoer og timer, hvor flere observationer falder oven i hinanden for arten. De stiplede linjer viser beregnet solopgang og solnedgang for en position ved Samsø (55.9526, 10.6636), så de giver en omtrentlig dansk reference gennem året. Kun arter med mindst 30 tidsatte observationer er medtaget. Hybrider, ubestemte taxa (for eksempel fund med skråstreg eller sp.) og observationer med Kvalitet = 3 er udeladt. Kilde: www.DOFbasen.dk. Spørgsmål eller kommentarer: dpe@dof.dk

Dataperiode: 21. september 1947 – 3. juni 2026
Tidsatte observationer brugt: 108,663
Udvidede observationstime-rækker: 131,440
Unikke dag/time-fliser med data: 62,728
Antal arter og underarter inkluderet: 200

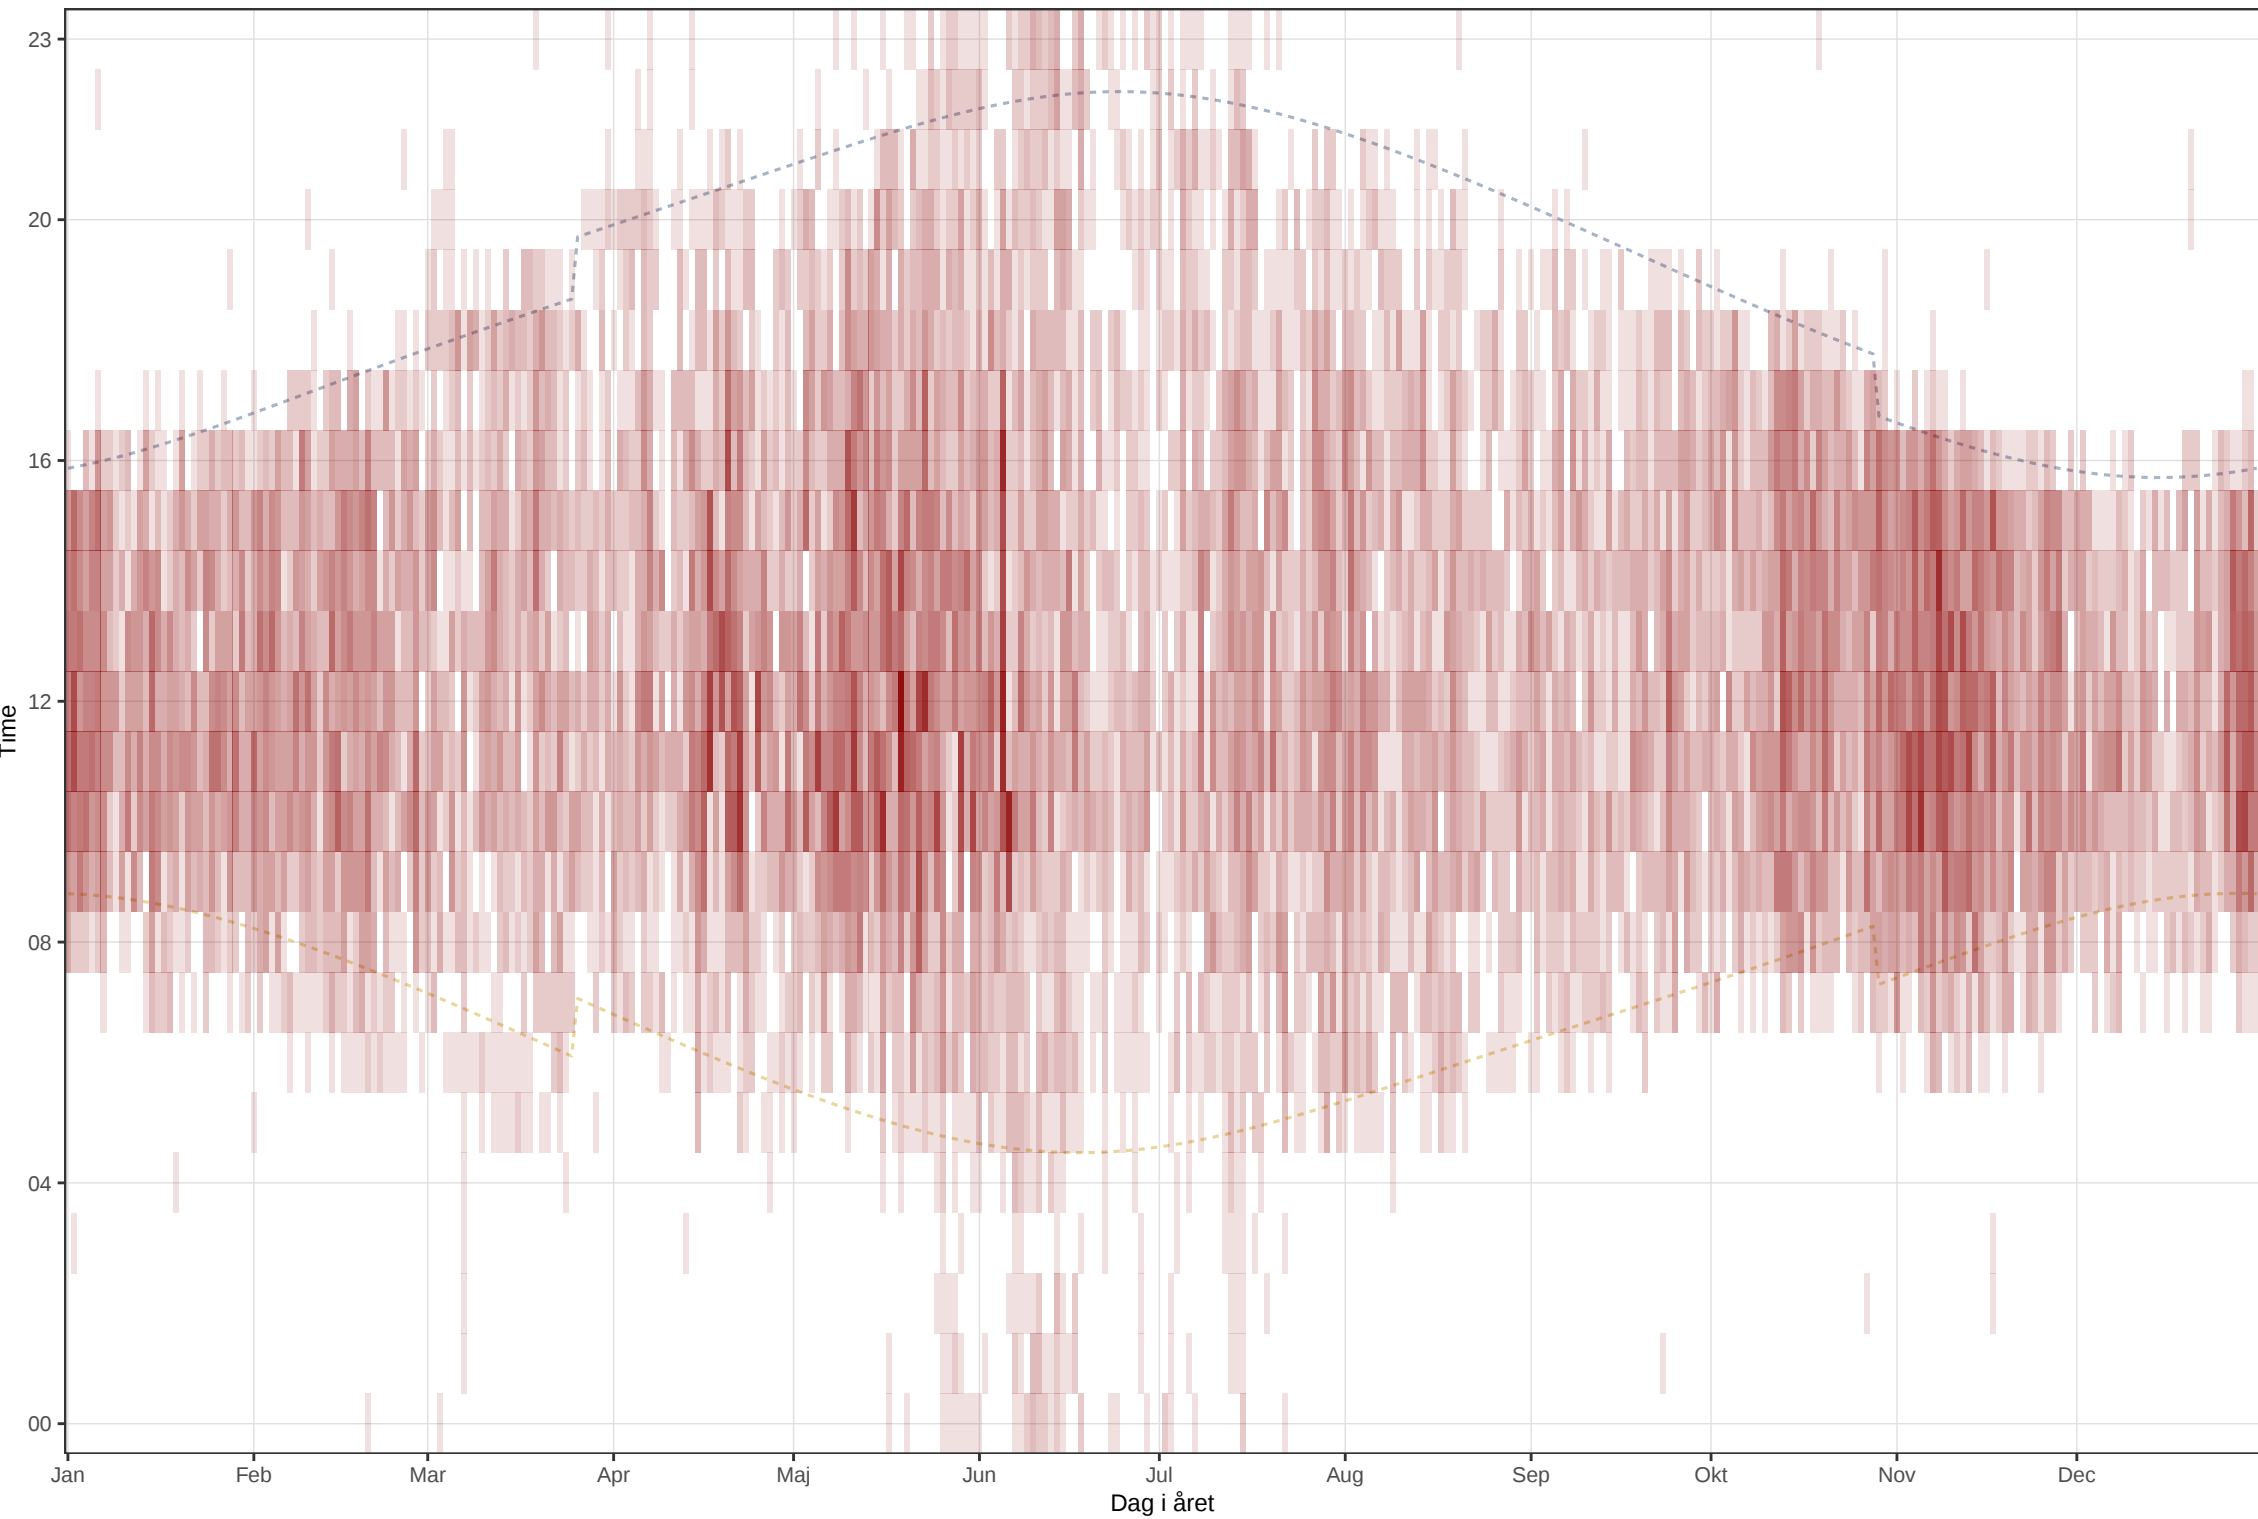

Samlet døgnforekomst for Subhits

Her summeres alle artstiles for denne kategori efter tidsudvidelse og deduplikering, så mørkere felter viser de datoer og timer, hvor du oftest kan forvente sjældenheder i kategorien.

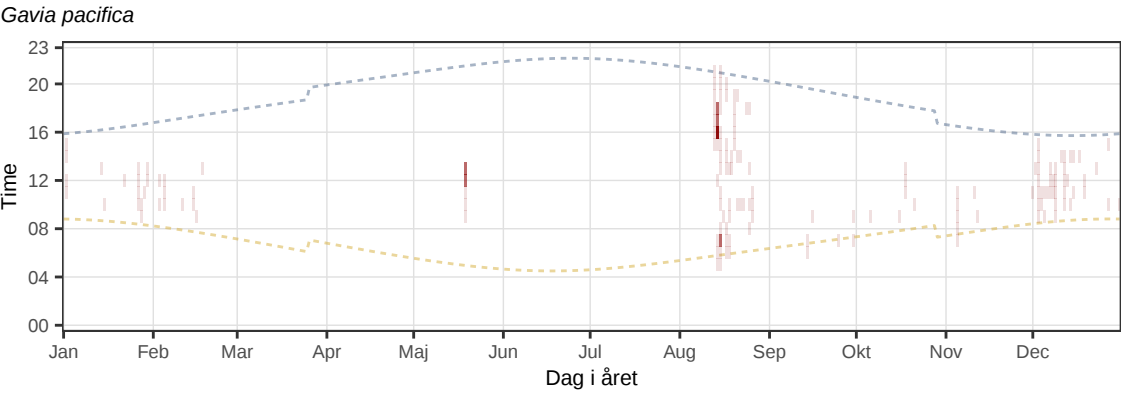

Samlet døgnforekomst for SU-hits

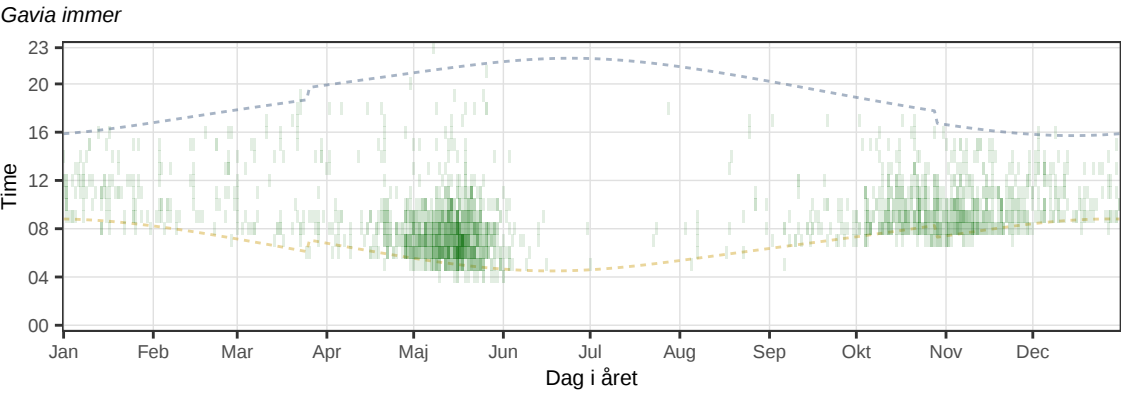

Her summeres alle artstiles for denne kategori efter tidsudvidelse og deduplikering, så mørkere felter viser de datoer og timer, hvor du oftest kan forvente sjældenheder i kategorien.
